

TILT & TURN windows

- Locking, tilting, and turning controlled by the simple turning of one handle
- Windows open to the inside so glass can be cleaned in hard to reach places
- Strong, secure, and energy efficient designs

Wood tilt & turn

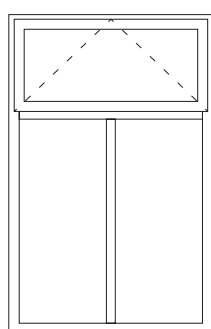

Wood - aluminium clad
tilt & turn

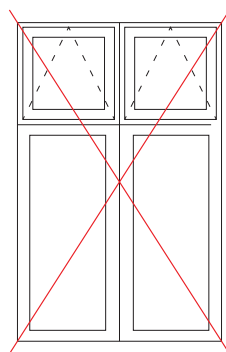

Fenstür's Tilt & Turn Windows

- North America's only Profile Changing Window!
 - Our advanced machines change the shape of a window frame along a single piece of wood to switch from an operable window to a fixed piece of glass. Mulling windows together (when multiple separate windows are screwed together to form one larger one) is a thing of the past!
 - Profile changing achieves an increased glass area, window strength is improved, manufacturing costs are reduced, and there is decreased installation efforts.

One frame divided by crossing mullions

Fenstür's Change of Profile Window

Four individual units mullered together vertically and horizontally

Windows by Other Companies

- Passive House Certified, Net Zero, and Step-Code 5 energy options
 - Double, triple, quadruple, and LiteZone® glazing options
- Concealed hinge's available
 - Industry leading 150kg (330lb) weight capacity hinges allows for larger windows to be built using heavier and thicker glass providing:
 - more natural light
 - improved energy efficiency
 - better thermal insulation
 - reduced noise transmission
- Tilt before turn, tilt-only, and balcony door hardware options
- Magnetic assist closing options
- Optional micro-ventilation tilting
- Insect screens available from the factory
